RE: Letter of invitation

It is my pleasure to agree to host your study in my lab as visiting scholar from October 2018 through September 2019. if you are granted funding from the China Scholarship Council. From the communication between us, I believe your English is fluent enough to undertake research studies in Purdue University and your English level is up to our requirements. The projects in my lab focus on the molecular genetics of abiotic stress signal transduction and small RNA biology, with a focus to discover regulatory genes that control salt, drought and cold stress tolerance, and to utilize the genes to improve the hardiness of crop plants. I will provide guidance and extend to you all the facilities required for your research work.

I look forward to meeting you after you arrive.
